

## Public responses to EcoMobility

As part of research undertaken by the Gauteng City-Region Observatory (GCRO) into mobility patterns in the Gauteng City-Region, an online survey was conducted to gauge people's opinions and experiences of the EcoMobility Festival that took place in the Sandton CBD (Johannesburg) during October 2015. The results reveal a shift in commuting patterns, suggesting that there may be opportunities to cultivate a public transport culture, particularly among private car users. However, they also show that significantly more work is needed to improve public transport infrastructure and shift public perceptions.
